

Abstract

Appliance for cooking food articles, which comprises a container for receiving an amount of the food articles to be cooked and an amount of cooking liquid sufficient to only partially immerse the food articles therein. The container has a discharge end comprising an opening for discharging the cooked food articles and a cover for closing the opening during the cooking operation. The appliance also comprises a helical paddle; a shaft on which the paddle is mounted, such that shaft is rotatably supported by the container; a motor for driving the shaft; means for causing the motor to drive the shaft in either the cooking direction or the discharging direction; and a support for supporting the container in a slightly slanted position wherein the front end of the shaft is slightly higher than the rear end thereof.
